                                                                                                                                                                                                                                  This DNA sequence is a 6.8 kB PstI fragment isolated from Streptomyces glaucescens GLA.O and encodes the genes, acbA, acbB, accbC, accbD, acbE and acbF which are involved in the acatbose biosynthesis pathway. These genes and encoded enzymes are useful for producing acarbose, which is an alpha -amylase inhibitor useful in the treatment of diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360

ABL50555 to ABL50562 represent contigs 1 to 8 from the Micromonospora carbonacea everninomicin biosynthetic locus gene cluster. The contigs encode the protein sequences designated ORF (open reading frame) 1 to 49, given in ABB06881 to ABB06890. The gene cluster is useful for the construction of the everninomicin antibiotic in overproducing strains, and to allow chemical modifications of everninomicin to enhance certain properties via genetic manipulation or combinational biosynthesis. The gene cluster can be used to produce genetic systems and genes encoding novel enzyme activities, and avoid the problems of low yield and quality of everninomicins produced by chemical synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TCGGCCGCCGATCCCGGGCGGGCCCGGCTGCTCACCCCGGTCGGGGACCCGTCGGC 2687

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ï
                                                                                                                                        This invention describes novel nucleic acid sequences from Actinoplanes sp. SESO/10 (CBS 614.71) designated acbA, B, C, D, E, F, G, H, I, J, K, L, M, M, O, P, Q, R, S, U, V, W, X, Y and Z, and asp3.1, 3.2 and 3.3, and their homologues. The products of the invention individually or collectively, are used for synthesis or bioconversion of acarbose (or its precursors or related substances with alpha-glucosidase inhibiting activity), especially of alpha-glucosidase inhibitors. The products can also be used for optimising/inducing production of such compounds in Actinoplanes, or other organisms. This sequence encodes a protein involved in the acarbose biosynthesis and bioconversion pathway which is described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid sequences from Actinoplanes, useful for synthesis and bioconversion of acarbose and related inhibitors of alpha-glucosidase

This is contig 003 from the recombinant cosmid pkOSO23-27 DNA sequence (see AA25601) which contains a Streptomyces venezuelae DNA insert. The cosmid contains open reading frames which encode the various modules of cosmid contains open reading frames which encode the various modules of confensations and subsequence for a narbonolide PKS.

The invention relates to polyketide synthase (PKS). The invention relates to recombinant DNA containing a coding sequence for a narbonolide PKS.

CC series of condensations and subsequent modilications. Modular PKSs are responsible for the production of many antiblotics including picromycin. The narbonolide PKS consists of a loading module, six extender modules.

CC and two thioester domains. Four proteins make up the narbonolide PKS or PICAIII and PICAIV). PICAI includes the loading module of and extender modules I and 2, PICAII includes extender module 6 and atype II thioesterase domain. The second type II thioesterase domain. The second type II thioesterase domain. The second type II thioesterase domain is found on the PICB protein. The nucleotide sequences encoding correquired for this conversion, and the desosaminylated in S. venezuelae to yield narbomycin, the desosaminylated in S. venezuelae to yield narbomycin, and the desosaminal blosynthetic genes are compinant to cosmid pKOSO32-27. Narbonolide is desosaminable to express, in transformed cells, narbonolide (or its derivatives) cor other ketolides (particularly hybrids), which may then be converted cells, by other enzymes recombinantly expressed in the same hosts) to converted to human or veterinary medicine. The nutlein intermediates. The antibiotics are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2329 CCGCCAAGCAGCTGCTCCCCATCGCCAACAAGCCCGTGGTCTTCTACGCGCTGGAGTCCC 2388

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is used to produce the recombinant DNA compounds of the invention. The specification describes a recombinant DNA compound expressing recombinant polyketide synthase genes in host cells for the production of narbonolide, narbonolide derivatives and polyketides that are useful as antibiotics and as intermediates in the synthesis of compounds with pharmaceutical value. The DNA compounds may also encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleotide sequence of ORF14 which encodes dNDP-glucose 4,6-dehydratase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant pick hydroxylase gene of Streptomyces venezuelae useful for converting ketolides to antibiotics and as antibiotics and intermediates in the synthesis of compounds with pharmaceutical value
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polyketide;
                                                                                                                                                                             4872
                                                                                                                                                                                                                                                                                                                                                          2732

a C12-hydroxyalse (plcK), desosamine biosynthesis and desosaminyl transferase enzymes (useful for conversion of ketolides to antibiotics), and the beta-glucosidase enzyme (involved in picromycin biosynthesis). These compounds are also useful for increasing the antibiotic activity of a compound relative to the unhydroxylated compound. The recombinant host calls are useful as genetic systems that allow rapid engineering of the narbonolide polyketide synthase. These would be valuable for creating novel ketolide analogs for pharmaceutical applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3099

Comportains a desosanthe biosynthetic gene cluster, a fragment or its biologically active variant, where the nucleic acid sequence is not derived from the eryC gene cluster of Saccharopolyspora erythraea or Streptomyces antibioticus. The invention also relates to a macrolide biosynthetic gene cluster, or fragments thereof. The macrolide biosynthetic gene cluster, or fragments thereof. The macrolide biosynthetic gene cluster encodes proteins which synthesise methymycin, plkromycin, nachomycin, narbomycin or a combination of these compounds. Recombinant or augmented cells comprising the desosamine and/or macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic proteins are useful for synthesis of methymycin, plkromycin, neomethymycin and narbomycin. The alternative termination of polyketide synthesis may be useful for synthesis of methymycin, plkromycin, neomethymycin and narbomycin. The alternative termination of polyketide synthesis may be useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) custiut propagnes. The compounds produced by the recombinant host cells are useful as biopolymers, e.g., in packaging or biomedical applications, to engineer PHA monomer synthases or to prepare biologically active agents, such as chemotherapeutics, immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other diseases involving respiratory inflammation, cholasterol-lowering agents or macrolides the proper control of antibiotics which are active against a variety of organisms, e.g., characterial active against a variety of organisms, e.g., characterial active against a variety of organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            bacteria, including multi-drug resistant pneumococci and other respiratory pathogens, as well as viral parasitic pathogens, or as crop protection agents (e.g., fungicides or insecticides) via expression of polyketides in plants. The present sequence represents the desosamine blosynthetic gene cluster from Streptomyces venezuelae ATCC 15439.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9301 TGAAGGGAATAGTCCTGGCCGGCGGGAGCGGAACTCGGCTGCATCCGGCGACCTCGGTCA 9242

The invention relates to an isolated and purified nucleic acid segment comprising a desosamine biosynthetic gene cluster, a fragment or its biologically active variant, where the nucleic acid sequence is not derived from the eryC gene cluster of Saccharopolyspora erythraea or Streptomyces antibioticus. The invention also relates to a macrolide biosynthetic gene cluster of fragments thereof. The macrolide biosynthetic gene cluster encodes proteins which synthesise methymycin, pixcomycin, neomethymycin, narbomycin or a combination of these compounds. Recombinant or augmented cells comprising the desosanine and/or macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic proteins and/or macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic proteins and/or macrolide biosynthetic gene clusters are useful for synthesis of methymych, pixromycin, neomethymycin and care useful for synthesis of methymych, pixromycin, neomethymycin and care useful for synthesis of methymych, pixromycin, neomethymycin and care useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) monomers. The compounds produced by the recombinant host cells are useful as biopolymers, e.g., in packaging or biomedical applications, to engineer PHA monomer synthases or to prepare biologically active agents, such as chemotherapeutics, immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other diseases involving respiratory inflammation, cholesterol-lowering agents or macrolide-based antibiotics which are active against a variety of organisms, e.g., antibiotics which are active against a variety of organisms, or as crop protecria, including multi-drug resistant pneumococci and other ceptratory pathogens, as well as viral parasitic pathogens, or as crop protecrial agents (e.g., fungicides or insecticides) via expression of protecrial agents in figure 32.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9988 TGAAGGGAATAGTCCTGGCCGGGGGGGGGAGCGGAACTCGGCTGCGTCGGTCA 9929

The invention provides a method to alter the sugar structure diversity for a particular metabolite via the recruitment and collaborative action of sugar genes from a variety of sugar biosynthetic pathways to yield a metabolite comprising a non-natural sugar, e.g., a novel gyvosylated polyketide. The invention also relates to a modified recombinant bacterial host cell (mRBHC) in which the expression and activity of nucleic acids encoding sugar biosynthetic enzymes has been altered. The mRBHCs may be cultured to produce the modified sugar products, tetracycline, polyene, polyene, polyether, ansamycin or isochromaneguinone. The present sequence is Streptomyces venezuelae sugar (desosamine) biosynthetic gene cluster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modified recombinant bacterial host cells in which the expression and activity of nucleic acids encoding sugar blosynthetic enzymes has been altered, useful for producing metabolites with altered sugar structures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               P-PSDB; AAE24228, AAE24229, AAE24230, AAE24231, AAE24232, AAE24233,

                                                                                                                                                                                  This sequence encodes a fragment of the Streptomyces glaucescens GLA.O acbD gene which has been generated via PCR. The acbD gene is involved in the acarbose biosynthesis pathway. This gene and other acarbose biosynthesis genes such as those represented in AAT76903 are useful for producing acarbose, which is an alpha -amylase inhibitor useful in the

```
The sequence is that of a 2634 BamHI fragment from Streptomyces nodosus which comprises the complete snoT sequence (encoding amphotheronolide B-dTDP-D- mycosaminyl transferase), the snoD sequence (encoding dTDP-D-glucose synthase) and the partial snoM sequence (encoding dTDP-D-glucose synthase) and the partial snoM isolated genes can be used for, the microbial synthesis of hybrid and glycosylated naturalk products in Actinomyces; increasing the secondary metabolite yield in Actinomyces; the isolation of enzymes in biosynthesis and their use in enzymatic synthesis; the glycosylation of cpas, by biotransformation in Actinomyces; the identification of structurally and functionally novel genes; and the screening of producers of secondary metabolites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2435

                                                                                                                                                                                                                                                                                                The present sequence represents the nogalamycin biosynthesis gene cluster isolated from Streptomyces nogalater. Nogalamycin is an anthracycline antibiotic, so the nogalamycin biosynthetic pathway is also known as the anthracycline biosynthetic pathway. DNA fragments, plasmids and process from the present invention are useful for obtaining novel hybrid antibiotics, such as anthracyclines (antitumour antibiotics)

                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel method nucleic acid (I) and its encoded composition of polypeptide (II) containing at least one region that encodes an enzymatic polypeptide (II) containing at least one region that encodes an enzymatic activity involved in biosynthesis of spinosyns. (I) are used (I) to denerate a library of polyketide synthases; (II) for (II); (II) to generate a library of polyketide synthases; (III) for consamine or trimethylrhamnose to a spinosyn or polyketide aglycone; and (iv) for recombinant production of the corresponding consames, which are used for production of (II), their precursors or derivatives, including production of transgenic plants that express of derivatives, including production of transgenic plants that express (C and thus have increased resistance to insects. (I) are also useful as macrolides with insecticidal, but not antibacterial, activity, and can macrolides with insecticidal, but not antibacterial, activity, and can calso be used to raise specific antibodies, useful for identifying consponence consumptions of also be used to raise specific antibodies, useful for identifying consponence consumptions and agene bank. Cells transformed with (I) may produce (II) at significantly increased levels or produce new derivatives of consumptions of all produce new derivatives of consumptions of a spinosa genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid encoding enzymes for spinosyn biosynthesis, useful for recombinant production of insecticidal spinosyns and their derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3457

This sequence is a DNA fragment of Saccharopolyspora spinosa, containing two genes involved in Rhamnose production. There are four enzymes involved in the production of rhamnose from glucose. The first is a glucose thymidylate transferase (gqt:AAY39322), the second is glucose to glucose thymidylate transferase (gqt:AAY39322), the second is glucose a glucose thymidylate transferase (gqt:AAY39322), the second is glucose. The first is a nepimerase (epi:AAY39323) and the fourth a ketoreductase (kre:AAY39322), kre and gdh genes are found in this sequence. These four enzymes are used during the biosynthesis of spinosyns are insecticidal microlides which are useful for the control of arachnids, nematodes and insects. Blosynthesis of spinosyns occurs via stepwise condensation and modification of carboxylic acid precursors generating a linear polykefide which is modified further. The DNA sequence AAZ1501 contains 24 genes and open reading frames involved in spinosyn biosynthesis, AAY39297-Y39319. The genes identified in S. Spinosyns as having a role in the production of spinosyns e.g. by mutagenesis, or interruption of steps in spinosyn biosynthesis. The modified spinosyns and any be a new insect control agent or serve as substrates for further chemical modification and the creation of new sequences from S. Spinosyns. The genes are also useful to isolate similar sequences from S. Spinosyns are also useful to isolate similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ij,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3517
